

Road Running Technical Council Course Renewal Procedure

USATF certified courses expire after ten years from original certification. Course certificates issued as certified prior to 2001 contain renewal language and may be renewed .

Courses certified in 2001 and later may not be renewed and must be re-measured for certification.

To renew an expired course it is necessary to complete an Application for Renewal of Certified Course form.

Forms are available for download from www.rrtc.net or from Bob Baumel, 129 Warwick Road, Ponca City, OK 74601 or bobbau@earthlink.net.

Forms are also available from Joe McDaniel, 1416 S. Marion Ave., Tulsa, OK 74112 or okrunjoe@cox.net.

The renewal application states clear questions for the race director, original measurer or technical director (i.e., person in charge of setting up the course on race day) to answer. This would require the person requesting renewal to visibly check the pertinent areas of the course. (start, finish, turnaround, if any, and any changes in the route)

The completed Application for Renewal of a Certified Course is to be sent to the regional certifier (Bob Baumel) along with a copy of the original certificate and map. Applications sent without original maps will not be renewed. Original certificates and maps are available from Bob Baumel or Joe McDaniel.

Once the certifier is satisfied that the course is as originally measured for certification he or she will produce a new certificate for the course using the original course number. Using the original number will allow historical identification and proper sorting of the course list.

The expiration date for ALL renewed courses is twenty years after the year of original certification but not later than December 31, 2011.

A 1985 course being renewed would expire at the end of 2005. (all expirations are done at the end of the year)

A 2000 course renewal will expire December 31, 2011.
