Walking hack & Joystick

A lot of rare pokemon are hiding inside those eggs. But to get to what's hidden inside, you either have to walk 2km, 5km, or even 10km!

Some people have tried crazy things to hatch eggs. Like tying their phones up to a ceiling fan and letting it spin around at high speeds. Things don't turn out as they planned when they find their phones smashed up or stuck in a wall.

Now you can hatch eggs while you sleep. Without worrying about destroying your phones or mobile devices!

Other hacking apps for pokemon Go have a limitation of only one speed.

We've calibrated the walking hack to make the trainer stand in place, walk, jog, or run.

This will simulate a real life human who is actually playing the game instead of making it look like a bot.

You can map a course for your trainer to take or set it to walk around in different directions.

The walking hack is the best way to hatch all your eggs sitting in those incubators. Or use it to walk towards pokemon nests Have you ever wondered how some players cheat in pokemon Go?

It's obvious they are using a pokemon Go hack to help them game the system.

It is easy to see who the hackers are, most of them have super high-level pokemon in every gym around you.

So we made up pokegohacker to even the playing field!

It will manipulate the game in many ways. Taking advantage of any back-doors, exploits, and vulnerabilities within games' code.

It is the ultimate pokemon Go hacking tool. Every player should have this before venturing out. Use it to catch new creatures, raid boss pokemon, take over gyms, get free pokecoins, and so much more!

Have you been walking around all day catching lame pokemon? When out of no where a rare one pops up! But you're out of pokeballs!

If you had the pokegohacker app installed you wouldn't be in this situation.

With a few taps you can have a stocked up back filled with pokeballs! Now you don't have to worry about losing the chance to catch any pokemon because you ran out of items.

We've added in a ton of features to make this the all in one hack, the last one you'll ever need!

Continue reading below to find out what else it's capable of doing.

How a VpN Helps You Change Region in pokemon GO from Anywhere

pokemon GO can determine your location by checking your Ip address. The company will also look at your mobile device's GpS coordinates to make sure that they match the location of your Ip address.

If it's determined that you have cheated, pokemon GO can use your Ip address to effectively ban you from playing the game.

A VpN (in conjunction with GpS spoofing apps in this case) allows you to avoid being identified by your Ip address.

This means that you can mask your online activity and change your location within pokemon GO. When you change your location, you can access certain pokemon and items that you wouldn't have been able to find otherwise.

VpNs also provide strong protection for those surfing the web or browsing through different apps. powerful encryption keeps your information safe from hackers or from other third parties.

How to Change Your Region In pokemon GO

Changing your region in pokemon GO varies depending on whether you are using an iphone or an Android mobile device. After downloading and installing a VpN on your mobile device, you'll also need to install a GpS spoofing app as well.

Android:

Choose a VpN and register for the service. We recommend choosing NordVpN.

Download and install the VpN on your mobile device. You can find NordVpN in the Google play Store.

Go back to the Google play Store and download the Fake GpS Location app.

Now, visit your Android device's settings.

Once in settings, click "About phone."

Tap "Build Number" seven times. This will turn on developer mode.

Go back to settings and visit "Developer Options."

Click the option that says "Mock Locations App" or "Allow Mock Locations."

Now, you'll need to install a module named "Mock Mock Locations." This is to stop apps like pokemon GO from figuring out that you have mock locations enabled.

Download Mock Mock Locations here, from the Xposed Module Repository.

Turn on Mock Mock Locations.

Now turn on your VpN on your mobile device and choose a server in a location where youâ€™d like to find pokemon.

Make sure youâ€™ve turned on the spoofing app and choose a location there as well, ideally the same location so that your Ip address aligns with your GpS.

Thatâ€™s itâ€“you are good to go. Turn on pokemon GO and start searching for your favorite pokemon like Gengar, Snorlax, and pikachu.
